Subject: EPA Releases Fourth Set of Sampling Results for Dimock Wells

Alan -- Here is the EPA statement;

EPA has completed and shared with residents and Pennsylvania state officials the fourth set of sampling for 12 private drinking water wells in Dimock, Pa. This set of sampling did not show levels of contaminants that would give EPA reason to take further action. At one well, EPA found an elevated level of methane and informed the resident, the Pennsylvania Department of Environmental Protection and the Susquehanna County Emergency Management Agency. Throughout EPA's work in Dimock, the Agency has used the best available scientific data to provide clarity to Dimock residents and address their concerns about the safety of their drinking water.

For more information on the sampling results, visit: <http://www.epa.gov/aboutepa/states/pa.html>

Subject: questions on Dimock PA water testing

Roy,

EPA has released its fourth set of water sample results from drinking water wells in Dimock, Pa. Is there an announcement on this that I can receive? And a URL to the posted test results? I believe that EPA has again found that the water meets federal standards, right? That is what Cabot Oil and Gas Corp. is saying, anyway. The company says these results were released today.

I also left you a voicemail message to ask about this. I hope you can help. I need to meet a deadline later this afternoon.

I write for BNA's Daily Environment Report.
